Comments: The Trump Administration's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan, as discussed on page 9088 of the February 6, 2025 *Federal Register*, is an important and wise action.

The administration has already taken several strong and appropriate steps on AI policy. In particular, the President's January 23 executive order, which launched this public commentary process while removing burdensome requirements for companies developing and deploying AI is essential for ensuring the U.S. remains the world's global leader on AI, while also removing unnecessary government control over the development of AI.

U.S. AI policy should fully align with Vice President J.D. Vance's remarks to world leaders and tech luminaries at the February 11, 2025 AI Action Summit in Paris. This is a comprehensive and energizing roadmap to ensure that the U.S. maintains global AI dominance and that the world, and all Americans, benefit from it.

America will prosper and be stronger country if AI is systematically used to identify and eliminate wasteful and unnecessary federal government expenditures. Indeed, AI must have a central role in getting America's fiscal house in order.

An April 2024 report from the U.S. Government Accountability Office found that the federal government loses $233 billion to $521 billion annually due to fraud alone. The Congressional Budget Office projects the Fiscal Year 2025 budget deficit will be $1.9 trillion.

The House Budget Committee, following a June 2025 roundtable, said, "AI could be used within the Federal Government to revolutionize audits, catch improper payments, streamline entitlements, and bolster national security. The technology is currently being used in more than 700 instances in the federal government."

It is one thing to use AI in the federal government. It is another to strategically deploy it most effectively and to document that it is making government more efficient for those who pay for government, the American people.

As an initial step, the President should issue an executive order asking each Cabinet department to identify and report on a minimum of two significant ways in which AI has, or in the coming six months will, reduce costs and improve efficiencies. The findings should be due September 30, 2025, the end of the fiscal year. The reports should be publicly available, to other government agencies, including Congress, the media, and the American people.

The frequency and content of such reports should be assessed by policymakers. Quarterly or even more periodic reports should also be considered.

Thank you for your attention to these matters.

Respectfully,

/s/Paul F. Steidler
